- Member of the committee of certificate accreditation in the Libyan board of medical specialisation 2015- present.
- Member of committee for medical supply to ministry of health 2012- present.
- Founder & head of surgery department in gastroenterology center of Misurata 2012- present

CLINICAL EXPERIENCE:

I have been working in Misurata university hospital for the last 13 years (up to 2013) as a consultant and head of unit B of surgery then at Misurata cancer centre as consultant surgeon and head of surgical oncology department (2013- present) . Misurata university hospital is a teaching hospital affiliated to Misurata University. It is a very busy hospital of 450 beds. It serves the middle part of Libya of catchment area of more than 500,000 people. It is a referral hospital. It has a major trauma department, general surgical department, an orthopaedic department, neurosurgical department, medical department, paediatric department, gynaecology department and a well-equipped 20 bed intensive care unit. The operation suit contains 9 operation rooms. Most of the routine and emergency operations in different specialities are performed. The laboratory and the radiology department are well equipped. There is a pathology department attached to it. It has a busy postgraduate centre which was established since 1995. Misurata cancer centre is a specialized centre covering the mid land region of Libya it is 250 bed hospital with 6 operation theatres and good radiology , histopathology , medical oncology , radiotherapy departments.

All the postgraduate students and the Libyan and Arab board candidates have been trained here since 1995 in all the specialties already mentioned. We have been inviting many expert surgeons from Europe, north America and some Arab countries to train our surgeons and perform difficult operations and procedures that could not be performed by the local surgeons.

Colorectal Surgery;

My experience in colorectal surgery includes management of cancer colon and rectum, diverticular disease of the colon, different anal conditions. Cancer colon is being managed mostly by laparoscopic procedures. The following operations are performed frequently:• Right hemicolectomy• Left hemicolectomy• Sigmoid colectomy• Abdominoperineal resection• Hartman's procedures• Total colectomies with ileo-anal anastomosis the number of colorectal operations being performed is minimum 2 cases per week.

Laparoscopic Surgery and minimally invasive surgery : I perform laparoscopic cholecystectomy, appendectomy, TAPP, para umbilical hernia repair diagnostic laparoscopy, adhesiolysis and splenic cystectomy different colorectal procedures, adrenalectomies , hiatal hernia & antireflux procedures.

Upper Gastrointestinal Surgery :

My experience in Gastro-oesophageal surgery includes operations for peptic ulcer, hiatus hernia, cancer stomach and oesophagus, achalasia cardia and trauma. The operations carried out for peptic ulcer were truncal and highly selective vagotomy. and partial & total D2 gastrectomy were carried out for malignant disease of the stomach. The main indication for gastric surgery was complicated duodenal ulcer disease and gastric carcinoma

Hepatobiliary surgery:

operations performed include open and Laparoscopic cholecystectomies (the main procedure performed) with no mortalities and acceptable rate of morbidity . The main indication of surgery was calculi disease. Carcinoma of the gall bladder and Cholangiocarcinoma constitute 2% of the operated cases where palliative procedures were performed. Different types of biliary resections and biliary enteric anastomosis are performed for benign and malignant conditions. Infrequently we see biliary trauma which we treated successfully in most of the cases. Liver surgery I have performed operations for hydatid cysts, liver abscess and trauma. More than 100 cases of hydatid cysts in the liver were managed mainly by endocystectomy and occasionally partial pericystectomy and total cystectomy. I have managed many cases of traumatic liver injuries with repair & partial hepatectomy.

Pancreatic surgery

I have performed operations on pancreas for carcinoma, pseudocysts and true cysts. Pseudopancreatic cysts are operated by internal drainage, whipple's procedure and distal pancreatectomy, palliative triple bypass performed in advanced pancreatic cancer.

Splenic surgery:

I have performed large numbers of open splenectomies for trauma, & laparoscopic splenectomy for pathological spleen mainly ITP, hydatid cysts.

Vascular surgery:

Most of my experience is in vascular trauma & varicose vein surgery.

Breast Surgery:

I perform all forms of breast surgery for benign and malignant conditions; wide local excisions, mastectomy and Axillary clearance.

Thyroid surgery:

I perform all forms of thyroidectomy, neck dissection and parathyroidectomies for benign and malignant conditions.

Emergency surgery and war surgery:

I have performed many operations on trauma cases that included splenectomies, operations on colonic injuries (resections and stoma formation), gastric injuries, liver injuries,

thoractomies for chest injuries and stab wounds to the hearts and many and different amputations. Since the Libyan revolution (17/2/2011) my department has been involved in the management of all types of war injuries.

Hernia surgery: I have performed many cases of hernia operation. Lechneistein procedure& TAPP are the standard treatment for inguinal hernia repair. The incisional hernia, umbilical hernia repair is performed by placement of (sublay) mesh & some cases operated laparoscopically. I have performed more than 200 cases with few minor complications.

Publications;

1. Co-author of Guide Lines of Surgery (comprehensive book for undergraduate student)published by Tripoli university .
2. laparoscopic surgery results in Misurata hospital, presented in the 14thconference of the Libyan surgical association 2007.
- 3.DVT, risk factors, diagnosis & results of management presented in the 14th conference of the Libyan surgical association 2007.
4. Study of BMI & lipid profile as risk factors for gall stone formation, presented in the 3rd conference of the young doctors of Libya 2007.
5. Comparison between results of TAPP & open mesh repair, presented in the 13th conference of the Libyan surgical association 2006.
6. Colorectal cancer in Misurata area retrospective study, presented in the 13th conference of the Libyan surgical association 2006.
7. Laparoscopic cholecystectomy , results & causes of conversionpresented in the 13th conference of the Libyan surgical association 2006.
- 8.Dermoid cyst of the mesentery, case presentation, publishedin the journal of south Carolina university 2006.
9. Spontaneous rupture & haemorrhage of hepatic focal nodular hyperplasia in lobus caudatus, published in journal of hepatobiliary pancreatic surgery.2005;12(2):138-42
10. Spontaneous rupture of the spleen in chronic calcifying pancreatitis: report of 3 cases. Published in gastroentologie Clinique et biologique 2005;29(5):604
